

As of October 1, 2024, NRCS began offering financial assistance for implementation of Virtual Fencing (VF) through its EQIP program. NRCS accepts producer applications for its conservation programs year-round, but producers interested in funding during the current fiscal year should apply by their state's ranking dates. Please confirm with your local NRCS/FSA office. This document is intended as a starting point for producers/graziers interested in VF to start conversations with their local NRCS agents, and with VF vendors. When possible, answers are provided in green. This document also includes a list of NRCS offices, VF vendor contacts and additional resources.

Questions to discuss with NRCS agents

- How will the timing of financial assistance and the availability of collars be synched?
 - What happens if producers cannot get the equipment during their contract period?
 - Can a contract be revised to help pay for physical fencing infrastructure instead of VF in the case of low supply?
- Does NRCS provide VF financial assistance for brush management (314)? **If grazing animals are used to accomplish brush management, a 528 plan would still be necessary.**
- Is this assistance available nationally, or state dependent? **Each state office will be able to assert its own ranking, budgets, caps, and provide staff training.**
- Are VF payment scenarios based on acres or head of livestock? **The payments for VF will be per head of livestock, not per acre.**
- If I have a current contract for a 528 plan can I incorporate VF mid-contract. **No, you would need to apply for a new contract.000**
- When are applications due? **NRCS accepts producer applications for its conservation programs year-round, but producers interested in funding during the current fiscal year should apply by their state's ranking dates. Please confirm with your local NRCS/FSA office.**
- What % of producer costs will these scenarios cover?

Questions to discuss with Virtual Fence vendors

- Is VF right for my operation?
- Are collars, base stations and other equipment available now?
- Can I use VF to manage water access (allow or prevent animals from accessing water sources)?
- How much flexibility do I have to create perimeter shapes? Can a producer create a circular virtual pasture?
- How long do collars take to charge? Do you offer a multi-port charger to charge multiple collars at a time?
- Are there different size collars for young and fully grown animals?
- What technical support do you provide? Technology support? Implementation support?
- Can multiple users access the app to manage the VF system?

Additional Resources

- [Virtual Fencing 101 materials from Green Lands Blue Waters](#)
These materials provide an introduction to virtual fencing for NRCS field staff, grazing educators and other conservation professionals. All of these materials are available for you to use for free. We encourage you to use them individually or as a group. The presentation was designed so that anyone can review and deliver it. The pre-recorded webinar provides an opportunity to see the presentation delivered by the authors to assist others in delivering to their audiences. The webinar recording can also be used as is, to be shared directly with an audience.
